

**R&D:** The CCube EDRM solutions are in widespread use across the UK, from the Island of Orkney to Cornwall. **Across all the sites, the on-premise solutions are holding and managing over 350M records for some 30M patients, that's almost 2 billion pages of unstructured content.** We are always looking for technology innovations to help extract useful and actionable data from the huge volume of unstructured content and currently partner with experts in the field of machine language and data analytics.

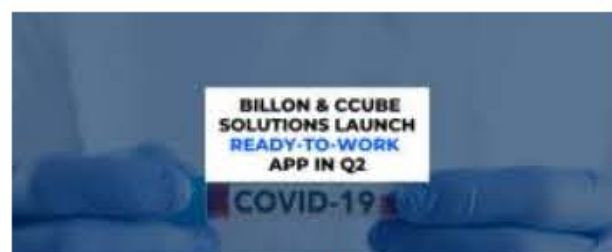

**CHARTAPORTA** CCube Solutions are delighted to announce our partnership with ChartaPorta and the Aluma Service. Aluma was born as a Cambridge University AI research project that enables the digital transformation of high volumes of unstructured content. We are working closely with the team at ChartaPorta, to develop tools for automatically extracting actionable data from the content held in CCube EDRM, including extracting metadata from documents held on shared drives and migrating the contents of shared drives into the CCube EDRM, and extracting additional metadata from existing records for faster search results.

We partner with Draper & Dash on data analytics – the D&D Health Data Science Platform (DSP) was developed with one focused thought in mind – to ensure real time, retrospective reporting and predictions can be made easily accessible to an entire organisation. Nestled between data systems and the DSP interface is an advanced collection of libraries that have been carefully curated for healthcare data by healthcare experts. D&D's team of data scientists have constructed dynamic machine learning powered models to answer some of the most pressing challenges within healthcare and hospital settings today. The models are symbiotic and link together to provide an advanced layer of insight into many aspects of patient care.

### **CCube Solutions, Billon Group and The Gekko Group partner to launch a COVID-19 Ready-to-Work app in Q2 2021**

We joined forces with enterprise DLT creator Billon Group and digital services company The Gekko Group, to launch an App in Q2 this year. The app uses the distributed ledger document management platform designed by Billon. It will allow medical and non-medical staff to easily prove they have all the necessary certification and training to work in restricted COVID-19 areas or to move between clinics --potentially saving days of certification delays and administrative hassle. Interested **CCube clients can join a free pilot, submitting their interest no later than Tuesday, January 25** – please email [info@ccubesolutions.com](mailto:info@ccubesolutions.com)
